

Capable Citizen Simple Sling Installation Instructions

- 1) Ensure firearms are unloaded and in a safe condition to be working with them.
- 2) Open up the rear of the sling, leaving one or two of the tri-glide buckles attached along a single layer of the sling, depending on how you prefer to attach the sling.
- 3) Thread rear of sling through an opening on the stock, or other rear mounting location, capturing a tri-glide if required (method 2)

Method 1

Method 2

- 4) Thread sling back through tri-glide buckles, securing by “doubling” the webbing back on itself to finish.
- 5) Open up U-Loop at the front of the sling by pressing the ball end forward.

- 6) Once opened, thread ball end of the U-Loop cable around a sturdy forward attachment location. A front sight post, molded metal loop, holes in a handguard rail, etc. are all great options.
- 7) Thread the ball end back into the opening on the U-Loop and snug down to secure.

To Use

- 1) Pull the nylon webbing on the outside of the buckle back towards your body to tighten the sling down.
- 2) Pull the covered cord release out (or forward) to pivot the adjustment buckle open, while moving the firearm or sling with your other hand, to release tension.
